

# List Slicing With Stride Problems:

"""

## 0.Setup

*a.create a list of 13 integers and assign it to a variable*

## 1.List Slicing With Stride

*a.create a variable and assign it a list slice comprised of every 4th number from the list you made in step 0.a.*

*b.print the list slice from step 1.a.*

## 2.List Slicing with Stride and Omitted start and end indices

*a.using only stride, assign a list slice composed of every 3rd value from the list you made in step 0.a. to a variable.*

*b.print the list slice from step 2.a.*

## 3.Reversing Lists with Stride

*a.reverse the list you made in step 0.a. and assign it to a variable*

*b.print the reversed list you made in step 3.a.*
